Your 1-Page Plan
Vizdale Full-Stack Developer Internship

Your Name	GOWTHAM V
Project	ClientLocker
Client	Vaigai Vel & Associates — an accounting firm in Madurai
Who will use it?	Partners, assigned staff, clients , and auditors with access to exactly 2 clients
Your How Might We, in your own words	How might we keep every client's files private, give each person access only to the clients they are assigned, and let partners see who opened or tried to open a file?
Your tool in one sentence	A private client-file locker where accounting-firm partners, staff, clients and auditors can securely access only the files they are allowed to see.

#	5 things a user can do
1	Sign in and open the correct role-based workspace.
2	View only the clients and files they are permitted to access.
3	Upload PDF, JPG or PNG files (partners and assigned staff only).
4	Open a file through a secure link that expires after 10 minutes.
5	Give or remove staff access and review the activity log (partners only).

Your AI feature	Own Trained - AI Feature
Main screens	Partner: all clients, client files/checklist/access management, activity log. Staff: assigned clients, files, checklist and upload. Client: own files. Auditor: files for the 2 assigned clients, with no upload option.
Made-up data you will use	1 firm; 2 partners; 6 staff (including 1 trainee); 10 clients; 5 checklist items per client; 1 auditor assigned to exactly 2 clients; fictional PDF/JPG/PNG bank statements, invoices and tax forms.
What worries you most?	Enforcing access on every server endpoint (not just hiding buttons), keeping files private, blocking old links immediately after access is removed, and correctly logging blocked attempts. AI must remain optional.
